- 문제지의 인쇄 상태와 매수 등 이상여부를 확인하시오.
- 답안지의 해당란에 성명, 학년 반 번호, 과목명 등을 시험실에 미리 게시한 '시험 시 유의사항'에 따라 정확히 표기하시오.
- 답안은 다음과 같은 방법으로 작성하시오.
 - 선택형 : 물음에 알맞은 답을 골라 OMR 선택형 답란에 컴퓨터용 수성 사인펜으로 바르게 표기하시오.
 - 논술형 : OMR 논술형 답란에 문항 번호 기재 후 알맞은 답을 쓰시오. 논술형 답안은 검정색 볼펜으로 작성하시오.
- 문항에 따라 배점이 다르니, 각 물음의 끝에 표시된 배점을 참고하시오.
- 선택형 (21)문항 (80)점, 논술형 (3)문항 (20)점 / 총 100 점

1. 다음 글에서 주장하는 바로 가장 적절한 것은? [3.6점]

Korea has shown a growing interest in recycling spent coffee grounds in recent years. The government is taking steps toward the creation of a sustainable recycling system in the coffee industry, while companies are dedicating themselves to researching and developing new uses for coffee waste. By recycling materials such as coffee waste, individuals can also help protect the environment. With continued efforts, the recycling of used coffee grounds is expected to increase, encouraging more sustainable methods of enjoying coffee for years to come.

- ① 커피를 지속가능하게 즐기기 위해 커피 찌꺼기 재활용에 힘써야 한다.
- ② 커피의 인기가 증가함에 따라 커피가 건강에 미치는 영향을 알려야 한다.
- ③ 기업체들은 더 맛있는 수출용 커피를 생산하기 위해 연구 개발에 힘써야 한다.
- ④ 정부는 지속가능한 재활용 시스템을 만드는 대신 커피 소비를 늘리는 일에 집중해야 한다.
- ⑤ 커피 찌꺼기 재활용이 불가능하기 때문에 커피 찌꺼기 재활용 대신 다양한 음료 소비를 늘려야 한다.

3. [3.6점]

The famous German musician Johann Sebastian Bach once said, "Without my morning coffee, I'm just like a dried-up piece of goat." Today this sentiment is shared by many, with coffee shops springing up on almost every street corner, and it is common to see city residents walking around with a cup of coffee in hand. According to the International Coffee Organization (ICO), approximately 10 million tons of coffee was consumed worldwide between 2020 and 2021, and Koreans made a significant contribution to this huge total, consuming 150,780 tons of coffee. This means that every Korean adult drank an average of one cup of coffee every day throughout the year. Clearly, for Koreans and other world citizens, coffee is not just a drink but a daily necessity.

- ① How to Enjoy Tasty Coffee
- ② Coffee as a Daily Necessity
- ③ Harmful Effects of Morning Coffee
- ④ Johann Sebastian Bach's Popular Musics
- ⑤ Roles of International Coffee Organization

4. [3.7점]

A particularly powerful way in which human beings adapt and adjust to their circumstances is by changing behaviors in light of the consequences. For instance, a child who gets praised by her teacher for doing an exercise correctly is likely to continue doing the exercise in that way. A dancer who feels that a particular conditioning exercise is not giving any results is likely to give that exercise up in favor of another one that seems more promising. In general, we tend to do things that bring us some kind of benefit or act in ways that help us avoid some kind of problem, discomfort, or disadvantage. We also tend to do fewer things (or stop doing things) that lead to problems, discomfort, or disadvantages, and we tend to avoid acting in ways that do not bring any benefit or reward.

- ① The Necessity of Exercise for Adaptability
- ② How to Avoid Problems and Disadvantages
- ③ Why Parents' Praise Shifts Children's Focus
- ④ Hardships of Adapting to New Circumstances
- ⑤ How Humans Change Behaviors from Consequences

Noise-cancelling technology is not only used in music devices. Other fields also take advantage of this technology, such as ticket offices at tourist attractions which are often very noisy. Microphones are installed in ticket offices to (A) block/detect external noise, and an opposite sound wave is generated and transmitted through a speaker, enabling the ticket agent to hear the customer's voice clearly. Another area in which this technology is used is drive-through fast-food restaurants and coffee shops. They use noise-cancelling headsets to improve communication between employees and customers by (B) increasing/eliminating vehicle noise. These noise-cancelling headsets help drive-through employees take orders accurately. The same technology is also used for cars, whose audio systems generate waves to cancel out unpleasant sounds such as engine, wind, and road noise. Thanks to noise-cancelling devices, it is possible for drivers to focus on driving (C) with/without being disturbed by distracting noises.

5. (A),(B),(C)의 각 네모 안에서 문맥에 맞는 낱말로 가장 적절한 것은? [3.7점]

- | (A) | (B) | (C) |

[7~8] 다음 글의 주제로 가장 적절한 것을 고르시오.

7. [3.7점]

When we think about visiting a theme park, we seldom miss the chance to take a ride on a roller coaster. These popular rides offer thrilling ups and downs that many people enjoy. However, we don't often think about the scientific principles applied in these machines. Since roller coasters have no engines, their movement relies solely on the potential energy they gain at the top of the first hill they go up. When a roller coaster goes down a hill due to gravity, this energy is converted into the kinetic energy. Thanks to this scientific principle, it is possible for us to enjoy these exciting rides!

- ① various types of rides in theme parks
- ② how roller coasters move without engines
- ③ why many people enjoy thrilling ups and downs
- ④ ways to save energy when operating theme parks
- ⑤ the danger of riding roller coasters at high speeds

8. [3.7점]

Do you always study in the same spot? Don't. If you study in different places, that helps create variety, and that rich experience can reinforce what you are learning. When several college students told us they did school work in different places rather than in some favorite nook, that habit reflected the research on learning. Numerous experiments have found that if learners simply study in at least two different places, they are more likely to recall the material. In one of the first such trials, two different groups studied a list of words. Some students returned to the same room twice while their counterparts spent the same amount of time divided between two locations. When asked to recall as many words on the list as possible, those who had moved around did far better. Variety creates rich association, even when those connections form in the background, totally outside of what we are consciously thinking.

- ① the benefits of changing study locations to improve memory
- ② the advantages of reviewing the same material repeatedly
- ③ the importance of choosing a quiet place for effective learning
- ④ the crucial influence of social interaction on memory formation
- ⑤ the relationship between study time and academic achievement

9. 다음 글의 내용과 일치하는 것은? [3.6점]

The world's widespread love of coffee comes at a substantial environmental cost, as the extraction process generates significant waste. Only 0.2 percent of a coffee bean is used to make coffee, with the remaining 99.8 percent disposed of as waste. As a result, the vast quantity of coffee consumed worldwide produces millions of tons of coffee waste each year. So, what happens to all the waste from the coffee extraction process? Spent coffee grounds (SCGs) are classified as general waste and sent to landfills. There they break down, releasing methane, a greenhouse gas that is approximately 25 times more potent than CO₂. Some SCGs are incinerated instead of being buried, but this releases a lot of CO₂: 338 kg per ton. However, neither of these waste management options takes into account the potential value of coffee grounds. Although the grounds contain valuable organic compounds and minerals, they are simply destroyed. Fortunately, thanks to increased awareness of the coffee waste problem, companies, organizations, and governments around the world are working hard to improve the environmental impact of the coffee industry through circular economy measures. A circular economy promotes the reuse of resources for as long as possible, reducing waste and environmental costs.

- ① 커피 콩의 0.2% 만이 커피를 만들기 위해 사용된다.
- ② 커피찌꺼기는 일반쓰레기가 아니므로 매립지로 보내지 않는다.
- ③ 커피찌꺼기는 분해되어도 온실가스를 배출하지 않는다.
- ④ 커피찌꺼기는 무기물은 함유하고 유기화합물은 함유하지 않는다.
- ⑤ 순환경제는 쓰레기는 줄이고 환경비용을 늘린다.

(10~11) 다음 글의 내용과 일치하지 않는 것을 고르시오.

10. [3.6점]

Have you ever wondered what happens to sound waves when they enter our ears? Let's take a closer look. The journey starts from the external part of the outer ear, which gathers the waves and directs them into the ear. The collected waves then travel through the ear canal and reach the eardrum located in the middle ear. When the eardrum vibrates, these vibrations are transmitted to three small bones in the middle ear. These bones make the vibrations stronger and then pass them to a snail-shaped structure in the inner ear. Inside this fluid-filled structure are tiny hair cells. When the vibrations make waves in the fluid, the tiny hair cells move and generate electrical signals that travel to the auditory nerve. This nerve carries the information to the brain, where the signals are interpreted, allowing us to hear sound. Undoubtedly, it is a quite remarkable journey!

- ① The outer ear helps collect sound waves and guide them into the ear.
- ② The eardrum is located in the middle ear.
- ③ Three small bones in the middle ear weaken the vibrations before passing them on.
- ④ Tiny hair cells generate electrical signals when vibrations cause them to move.
- ⑤ The auditory nerve sends information to the brain.

③

11. [3.8점]

Most entrepreneurs put in tremendous amounts of time and effort in creating and launching new products and services and then make the mistake of overpricing them. They have created something they care deeply about, it's theirs, and this powerful sense of ownership distorts their perception of value which causes them to overprice their products. While many of them are quick to realize that their initial prices are too high, not all these people are happy or willing to drop their prices to make their products more attractive. And this can be a very costly mistake that may lead to the failure of their new business. When you launch a new product or service, your priority should be to get sufficient market adoption as soon as possible and you should be ready to sacrifice your initial prices and profits to achieve this aim. Once you have strong sales volumes, you can increase your prices to maximize your profits.

④

- ① Most business creators spend a lot of time and effort to bring new products to the market.
- ② A strong feeling of owning something can change how founders see its value, leading to high prices.
- ③ Even when they realize their starting prices are too high, some owners do not want to decrease them.
- ④ For long-term success, a new business must focus on making big profits right away rather than gathering customers.
- ⑤ After securing a stable number of sales, business owners can then raise their prices to make more money.

Studies of experts provide insight into what it means to have deep and flexible understanding. Experts in a particular domain are people who have deep, richly interconnected ideas about the world. They are not just good thinkers or people who are exceptionally smart. Rather, experts have knowledge in a specific domain — such as chess, chemistry, or tennis — and are not generalists. However, experts do not just know “a bunch of facts.” In fact, having expertise in a topic means that knowledge is organized into coherent frameworks, and the expert understands the interrelationship between facts and can distinguish which ideas are most central. Ultimately, this structured nature of expert knowledge _____.

- ① is based on a high IQ rather than specific training
- ② prevents them from learning new facts in other fields
- ③ leads them to overlook the central ideas of their domain
- ④ allows them to remember a vast amount of unrelated data
- ⑤ makes it possible to adapt and use information in various situations

13. [4.1점]

During the Ice Age, not only was the planet much colder, with ice sheets covering much of what we call the northern hemisphere today, but, crucially, it was much drier. In Ireland, we often associate the cold with the wet but if it is really cold, there is far less evaporation, fewer clouds, and less rain. Our world in the Ice Age was cold and dry, meaning it was difficult for plants to grow. In this type of climate, farming isn't an option: it's too risky to depend on any one piece of land to produce the energy you need. As the temperature rose and the ice caps melted, _____. The world got warmer and wetter, and people started to live around places where they could make food grow most intensively. This didn't happen overnight; it probably took thousands of years, with hunter-gatherers foraging and hunting, while doing a little side hustle in farming.

- ① people suddenly gave up on farming
- ② nature started to flourish and thrive
- ③ hunting became the only way to survive
- ④ the variety of plants decreased significantly
- ⑤ people instantly changed their whole way of life

14. [4.1점]

If you gesture while describing an event, do you think you'll be able to recall that event better than if you don't gesture? We had adults watch videos of toy objects, animals, and people performing various, sometimes odd, actions: a chicken sliding to a policeman, a jogger bending down to touch his toes, a fence swinging shut on its own. We then tested the adults' memories of these events immediately after the descriptions and three weeks later. Adults who were told to gesture while describing the events remembered more than adults who were told not to gesture, particularly several weeks later. To see if we'd get the same effects if people gestured on their own, we did the study again, but this time we gave the adults no instructions about gesture. We found the same patterns: _____.

Producing gesture along with speech makes the information encoded in that speech memorable.

- ① gesturing while describing an event spontaneously had positive effect on memory retention
- ② people who didn't use gestures remembered events much better than those who often used gestures
- ③ gesturing spontaneously to describe an event enhanced neither physical ability nor mental ability
- ④ spontaneous gesturing coupled with event description had nothing to do with the ability to remember events
- ⑤ gesturing without speaking was more effective than speaking without gesturing for delivering messages

Approximately 15–20% of global greenhouse gas emissions are caused by degradation and deforestation. Trees play a huge role in the carbon cycle. They convert the CO₂ in the air to oxygen through the process of photosynthesis, and consequently, they are viewed as a natural regulator of carbon dioxide. The existence of a larger amount of trees will no doubt lead to the reduced presence of carbon dioxide in the atmosphere and the increased existence of oxygen. Unfortunately, deforestation is preventing this process from being fully accomplished. And with half of the Earth's forests gone, the amount of carbon dioxide is progressively rising. With more carbon dioxide in the atmosphere, more of the sun's radiation is being reflected back to Earth instead of being released into space, and this is causing the planet's average temperature to drop. Accordingly, deforestation is a major issue when it comes to global warming.

Did you know that you can grow tasty mushrooms right in your home using spent coffee grounds? The nutrients found in coffee grounds ① is perfect for growing mushrooms. Here is a step-by-step guide ② writing for those who want to get started. First, mix 80 percent coffee grounds with 20 percent mushroom spawn. Then, thoroughly wash a milk container and make four small holes in the sides. Fill the container about two-thirds full of the mixture, with it ③ sealing tightly. Next, find a warm and dark place with a temperature between 18 and 25°C, and place the container there for two to four weeks until the mixture turns completely white. When this happens, move the container to a bright area with indirect sunlight and cut the top off. Spray the mixture with water two times a day to make the mushrooms. ④ to stay moist. Within a week, you will notice tiny mushrooms ⑤ emerge.

Which is the better environment for studying: a noisy place or a quiet place? Rarely (A) do people want / people do want to put up with a lot of noise because it can be unpleasant and distracting. Fortunately, scientists have invented noise-cancelling technology, which is now being used across various fields to reduce unwanted noise. What is the scientific principle behind this achievement? To understand this, let's examine how sound travels. Sound is produced through vibrations that occur from a sound source, when the strings of a guitar are played, for instance. The vibrations of the sound source cause the air (B) vibrating / to vibrate and the sound to travel as waves, similar to the ripples created in a lake when you throw a stone. When these sound waves reach our ears, the brain interprets (C) it / them as sound. Just as different ripples in water might overlap if you throw two stones, sound waves can also interfere with each other when they meet.

18. [3.8점]

However, it is not easy to entirely eliminate external noise with this technology.

Destructive interference is used in the noise-cancelling feature of headphones when we listen to music. There are microphones and noise-cancelling circuitry inside the headphones. (①) The microphones pick up sounds from the outside, and the circuitry analyzes them to produce opposite sound waves. (②) For example, if outside noise has a value of +1, the circuitry will generate an opposite noise of -1 and transmit it to the speakers. (③) This cancels out the unwanted sound even in noisy surroundings, so you can hear the music sound clearly without turning up the volume. (④) This is because achieving such complete noise cancellation requires the circuitry to convert the noise into digital data and instantly transmit the opposite sound to the speakers as soon as the noise reaches the microphones. (⑤) Therefore, this noise-cancellation technology is effective for predictable sounds like those of car engines and subways that occur regularly or over a period of time. However, it's relatively less effective for inconsistent sounds such as those of people talking close to you.

19. [3.8점]

But a careful analysis of this situation revealed that immigrants were forced to live in neighborhoods where crime rates were already high.

It is natural for people to observe happenings and then seek explanations for why those happenings occurred. But sometimes the reasoning is wrong because of one or more misconceptions. (①) One of these is the ecological fallacy, where an argument claims that there is a causal relationship between two things merely because they occur together. (②) For example, in the 1950s it was found that crime rates were the highest in neighborhoods where immigrants were most numerous. (③) Some people used this "co-occurrence" to argue that immigrants were a cause of crime. (④) They could not afford more expensive housing in safer neighborhoods. (⑤) Unless you analyze the claim carefully, you would misinterpret the relationship and thereby construct a faulty belief.

20. 주어진 글 다음에 이어질 글의 순서로 가장 적절한 것은? [3.9점]

We go out in the world every day and make decisions about what is safe or not and what is appropriate or not.

(A) However, in reality, most human decisions are made emotionally, and then we collect or generate the facts to justify these decisions. When we see something or someone who "feels" dangerous, we have already launched into action internally before we have even started "thinking."

(B) It is what psychologist Joseph LeDoux has suggested is an unconscious "danger detector" that determines whether or not something or someone is safe before we can even begin to consciously make a determination. When the object, animal, or person is assessed to be dangerous, a fear response, which has been called "fight or flight," occurs.

(C) On a conscious level we may correct a mistake in this "danger detector" when we notice it, but often, of course, we simply begin to generate reasons for why it was accurate in the first place. We are generally convinced that our decisions are "rational."

- ① (A) - (C) - (B) ② (B) - (A) - (C)
③ (B) - (C) - (A) ④ (C) - (A) - (B)
⑤ (C) - (B) - (A)

It is evident through various case studies that adopting digital minimalism can lead to improved mental health outcomes. For instance, a study conducted by researchers at Stanford University found that participants who limited their use of social media and digital devices reported lower levels of stress, anxiety, and depression. By reducing the constant stream of information and notifications, individuals were able to focus more on meaningful interactions and activities that promoted well-being. In another case, a corporate professional struggling with burnout and insomnia implemented digital minimalism techniques, such as setting boundaries for phone usage and practicing mindfulness. As a result, he experienced improved sleep quality, reduced stress levels, and a newfound sense of calm and clarity.

Practicing digital minimalism by (A) social media and device usage helps reduce psychological burdens like stress and anxiety while significantly (B) overall mental well-being.

[논술형1] 다음 글의 내용을 한 문장으로 요약하고자 한다. <조건>에 맞게 빈칸 (A), (B)를 완성하십시오. [8점]

An example of a circular economy in action occurs when a chain of coffee shops collaborates with an organization to collect spent coffee grounds from its shops. These grounds are processed to remove impurities and dried out. The resulting SCGs are sold to fertilizer companies, where they are transformed into organic fertilizer. This fertilizer is later sold back to the coffee shop chain. The chain provides the fertilizer to local eco-friendly farmers, who then sell their produce back to the chain. The farm produce can be used to create various food items, such as rice chips and dried sweet potatoes, which are sold in the chain's coffee shops. By repurposing coffee grounds in this manner, related businesses and local farmers can benefit both economically and environmentally.

The example of repurposing (A) into fertilizer and farm produce shows (B) to related businesses and local farmers.

In everyday life, we use previous experience to predict where we should pay attention. Different environments create different expectations. This was profoundly illustrated by the scientist Jared Diamond in his book *Guns, Germs, and Steel*. He describes an adventure wandering through the New Guinea jungle with native New Guineans. He relates that these natives tend to perform poorly at tasks Westerners have been trained to do since childhood. But they are hardly stupid. They can detect the most subtle changes in the jungle, good for following the tracks of a predator or for finding the way back home. They know which insects to leave alone, know where food exists, can build and tear down shelters with ease. Diamond, who had never spent time in such places, has no ability to pay attention to these things. Were he to be tested on such tasks, he also would perform unsuccessfully.

According to the text, _____ (A) _____ is determined by their past experiences, which are closely related to _____ (B) _____.

The big difference between working and long-term memory is that we are explicitly aware of the information in working memory, but we are not able to directly access the information in our long-term memory. We access long-term memory by bringing the information into working memory. For example, right now you are not aware of all the actors you have ever seen. They are stored in your long-term memory outside your consciousness. However, if I asked you to list all the actors, you would use your working memory to retrieve them one by one and reel them off. Your working memory can access your long-term memory and bring those memories to awareness. But remember it has a limit of seven items or chunks. Each actor would be an item. Try and hold all the actors you know in your explicit awareness. You might try to visualize a large group of them. But you still would only be aware of a few actors at any one time.
